

# How to Write a Blog Post

---

1. Find some inspiration! Look for an article or website related to science that sparks your interest.
2. Login to your Weebly account.
3. Click *Edit* beside your website title.
4. Click on your name/blog tab.
5. Click *Add a Post*.
6. Drag and drop a title, along with Paragraph with Picture.
7. Write about your interesting science news! Be sure to include the link where you found your inspiration. You must also have one other related source to help/support your information. Include this link as well.
8. Find a related creative commons picture, save it to your computer, then click *Add a Picture* (on the space where your picture will go). Upload your photo. Remember to include your photo credits!
9. Proof read your posts! If needed, copy and paste your text into MS Word to do a spell check on it.
